Subject: Application of Bluechem products

Through this letter I would like to inform you that we have started to apply the recommended products to our diesel combustion systems.

We performed your service and maintenance system on a 6090 TIER 3 engine combined with a 9660 STS with 5,204 hours on the engine and 3,204 hours on the thresher.

The problem that was present and what the customer had complained about was too much smoke emitting from the machine. The machine had no loss of power, the injectors were functioning normal and the other components relating to this problem along with the turbo were all thoroughly checked. No failed components or problems were found therefor the decision was made to use the BLUECHEM products.

We applied 5 - 300ml units of the "Diesel System Cleaner". For the 200 liters of fuel we used 3 - 375ml of the "Common-Rail Diesel System Clean & Protect". We also applied 4 - 300ml units of the "Nano Engine Super Protection".

The results were very positive; we had the combine under observation for 6 days while we conducted our tests which resulted in the elimination of the excess smoke with normal emissions and exhaust.

In conclusion from what we have observed and based on the results above I would like to recommend the mentioned BLUECHEM products, and furthermore, to inform you that we will be using the "Fuel System Cleaner" and "Radiator Oil Cleaner" on our company machines and equipment.

For the moment I am at your service for any questions or clarifications.

Sincerely,

Mr. Horacio Garcia Urias

Service Manager
